

BAT BOXES

LITTLE BROWN BAT

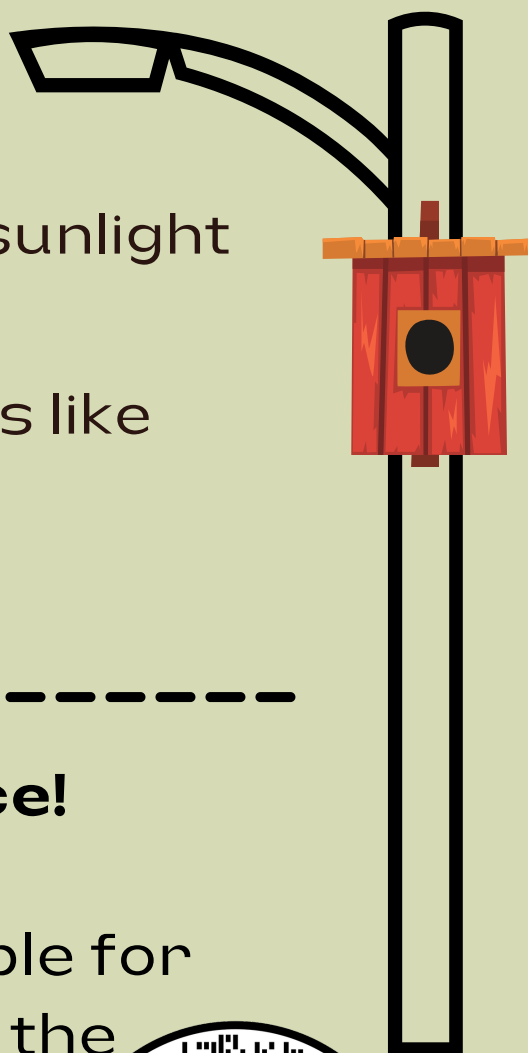

Colorado Little Brown Bats typically weigh less than half an ounce with wingspans up to 11 inches!

WHY BAT BOXES?

Artificial housing provides habitats to bats that may have been displaced or disrupted. Boxes protect bats from predators and allow them to provide ecosystem services like pest control, pollination, and seed-dispersal. This also keeps bats away from places we don't want them like attics and porches!

WHERE TO MOUNT BOXES

- Areas with 6-8 hrs of direct sunlight (East or South facing)
- 20-30 ft away from obstacles like tree branches
- 12-20 feet from the ground

Participate in Citizen Science!

Note locations around the DU campus you believe are suitable for bat boxes and submit them to the form found by this QR Code!
